

PRICE STRUCTURE

TECHNICAL DESCRIPTION

The interVIEW price consists of the following elements:

Basic installation

- basic licence
- customer licences that depends on the number of installations to be handled
- user licences that depend on the number of workstations from where all part of the system can be used.

These price elements constitute the basic installation. The basic installation will at all times determine the number of customers supported and the number of workstations available in the system. It is possible to buy additional customer and user licences as demand grows. Major discounts are available on purchases of several licences.

The add-on modules described below are also available.

Add-on modules

The price of add-on modules depends on the number of installations (customers). The calendar module price depends on the number of sites that are linked to a calendar. The following modules are available:

- Calendar module (supports the same no. of customers as the basic installation)
- Backup server, incl. copy function

Interfaces

One interface is required per supported protocol. Distinction is made between protocols supporting one-way and two-way communication.

- One-way interfaces
- Two-way interfaces

Others

Additional concentrators are available at a fixed price per concentrator whether used for backup purposes or distributed alarm reception.

Standard maintenance fees total 1,5% of the total monthly licence price.

24-hour service fees total 2,25% of the list prices + an hourly rate for assistance outside normal working hours.

System design:

Development tool: Borland Delphi
System architecture: 3-tier
Database: Sybase Adaptive Server

Min. requirements for hardware:

All PCs must support TCP / IP

Clients:

Standard up-to-date Windows-pc

Concentrator:

Processor: Core, 2 GHz
RAM: Min. 2GB
Disk: 20 - 40 GB
OS: WinXP Prof. / Win.7/32 bit, Win.Vista/32 bit

Server (applies to both the main server and the backup server):*Up to 1.000 sites (customers):*

Processor: Core, 2 GHz
RAM: Min. 2 GB
Disk: Min. 40 GB
OS: Win 2003, Win 2008

More than 1.000 sites (customers):

Processor: 2 - 4 stk. Core, 2 GHz
RAM: Min.4 GB
Disk: 72 GB SCSI / RAID
OS: Win 2003, Win 2008

The hardware requirements for the server also depend on the number of signals received, the general requirements for report generation and the customers' individual security requirements.
