

Reliable, flexible and detailed

ISM

interCOP/interGATE

Innovative provides maps and addresses based on geodata from the open-source project, OpenStreetMap.

This way, Innovative's maps and addresses are continuously updated by users around the world, thus ensuring that changes and corrections are quickly implemented.

Our customers can also choose to host the map and address service themselves, and thus enrich Innovative's data with their own local data, which can then become extremely detailed.

Advantages

- Reduced costs by replacing Google Maps
- Enriched maps and addresses with the customer's own local data by hosting the solution
- Possibility to work offline when hosting the maps
- Continuously updated maps

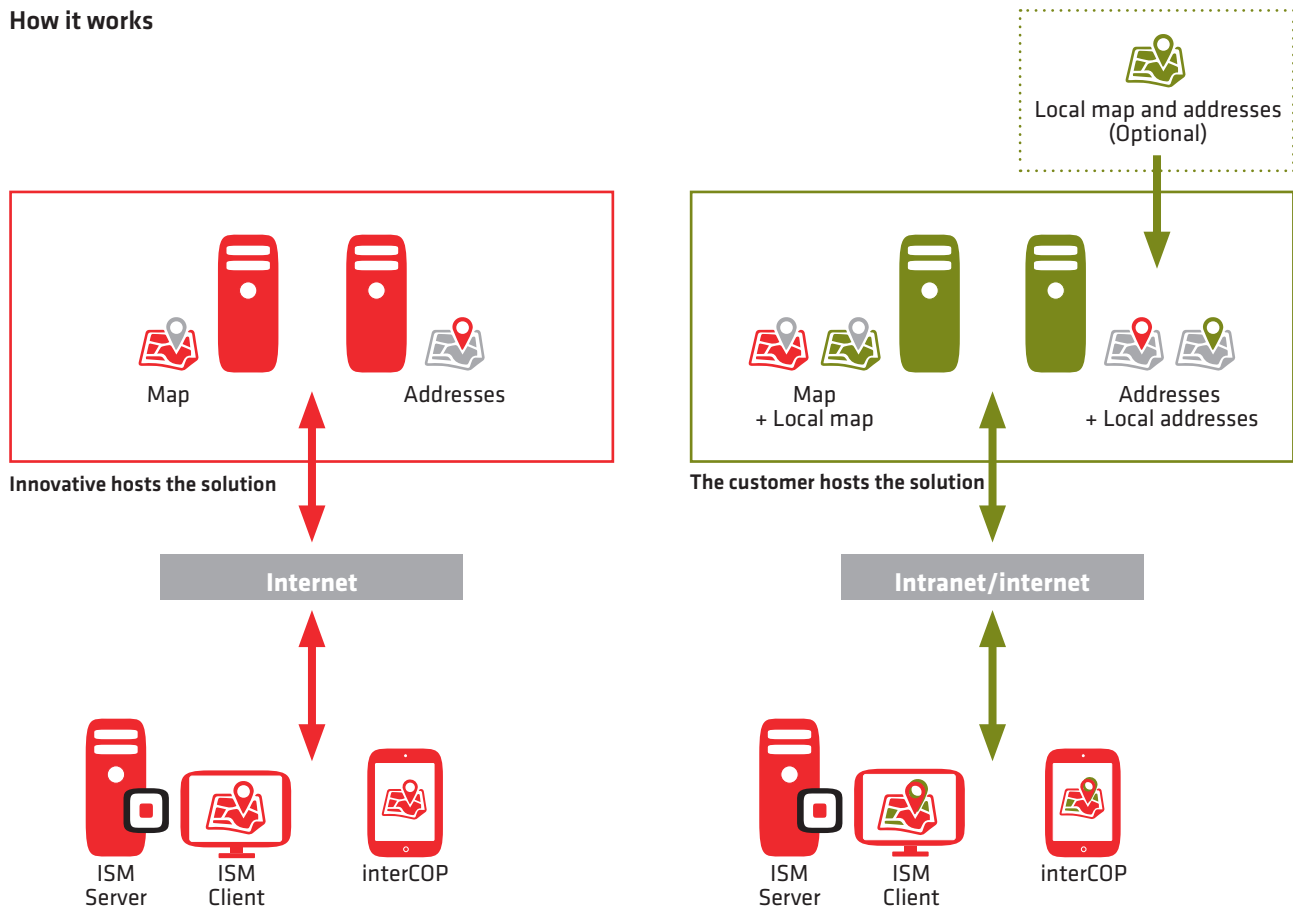

Selected features

- Based on geodata from OpenStreetMap, which is characterized by rapid implementation of changes and corrections to their map/addresses
- Innovative's map and address solution consists of two parts: the visual map in the form of tiles (PNG files) at different zoom levels as well as searchable address information
- Subscription service ensures continuously updated geodata
- Possibility for the customer to host the solution, making it possible to add/merge your own local maps and addresses

Maps & addresses service

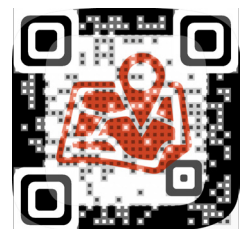

How it works

About OpenStreetMap

OSM is an international open-source cooperation project aimed at creating a free editable map of the world. OSM is built by a community of mappers that contribute and maintain data about roads, trails, cafés, railway stations, and much more, all over the world.
